# MK Temporary Staircase

## A height adjustable and self-levelling Class A stairway

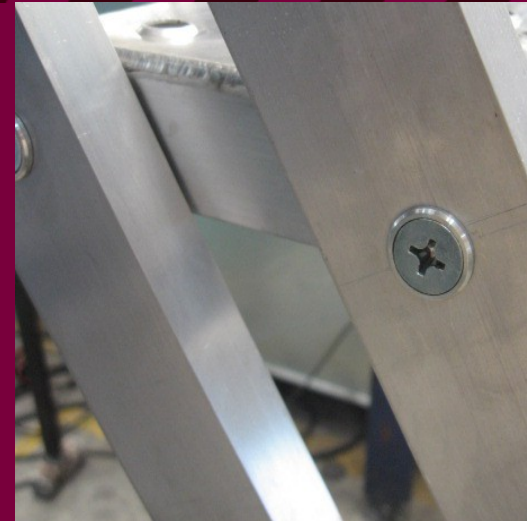

This product is a fully fledged Class A stairway that not only folds flat for easy transportation and storage but provides unrestricted access between floors before the finished staircase is installed. If, for instance, your stairs don't turn up on time or they haven't been made to your drawings, or there is some other problem with them – there is no need to delay your programme nor to take risks with ladders, simply install this stairway and carry on.

It's unique design allows it to be both height adjustable and self-levelling and it will fit any floor lift between 2 and 3m, the restrictor mechanism ensures that it is always compliant with the "goings and risings" according to BS EN 1004:2004 Stairway class A.

If, on the other hand, you are fitting a fully finished oak staircase then this product will solve all your access problems without subjecting your finished staircase to the rigours of hobnail boots and it can be used time and time again. Our standard safety rails can be fitted to either side or both sides if necessary.

- **No tools required for installation**
- **Lightweight and robust**
- **Reusable**
- **Non-slip tread pattern**
- **Height adjustable**
- **Self-levelling**
- **Aluminium construction**
- **Easy storage and transportation**
- **High visibility powder coating**
